If your tabs are missing in G2, it is because you switched to Windows 11 before IDS was ready for it. The latest release of G2 should solve the problem. If it doesn't, or if you are not ready to update your IDS, here is a work around that will restore your tabs.

Exit G2
Browse to "this pc"
Open the C drive
Open the idsastra folder
Open the apps folder
Open g2
Open g2client
Find idsg2client application. (It will have the red triangle icon.)
Right click on that
Click properties
Click compatibility
Check the box for "reduced color mode" the default is 8-bit 256.
Restart G2
